Ablation of Ventricular Ectopy Arising from the Anterolateral Papillary Muscle: Utility of Intracardiac Echocardiography

CHRISTIAN PERZANOWSKI, MD, FACC, FHRS

Electrophysiology, Tampa General Hospital/Bay Area Cardiology, Brandon, FL

ABSTRACT. Idiopathic ventricular arrhythmias from the papillary muscles have been infrequently observed. The unusual location of the arrhythmogenic site lends itself to a technically challenging procedure. This case describes the value of the CARTOSOUND platform in mapping and ablating ventricular ectopy of anterolateral papillary muscle origin.

ERRATUM

Due to an oversight, an incorrect figure was inadvertently omitted from the above April 2013 published article. The below Figure 4 is the correct figure for this article.

We apologize for any confusion this omission might have caused.
